

# Mividas Core

Enhance and future-proof your  
video conferencing platform.

# Manage and analyze video meetings and users

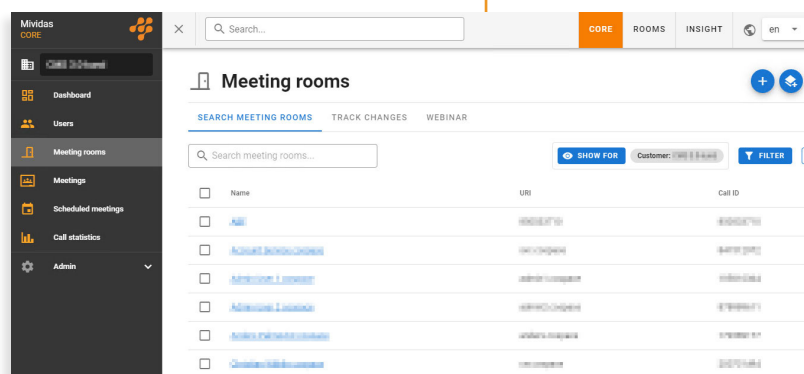

Unleash the full potential of your on-premise video meeting platform by giving both administrators and end users easy-to-use tools for video meetings.

Analyze usage, track trends and protect your investment by closing the gap to popular cloud platforms. Supporting both **Cisco Meeting Server®** and **Pexip Infinity®** platforms with seamless integration.

Mividas Core web interface

## Virtual meeting room management

Managing virtual meeting rooms is an integral part of Core. Administrators have access to a variety of powerful features for management, monitoring and support. End users benefit from a feature-rich experience and outstanding support.

**Management** — Create, update and remove virtual meeting rooms.

**Bulk actions** — Simultaneously create and update multiple virtual meeting rooms.

**User privileges** — Associate meeting rooms with users and set unique user privileges for each room.rooms.

**Burst calling** — Dial any number of video addresses when a meeting begins.

**Provisioning** — Automatic provisioning of room settings such as call-ID and SIP address.

**Automatic room numbers** — Option to automatically generate next numeric ID for created rooms.

## User management

Control and manage users. Manage features with policies to ensure security, empower self-management and give administrators and those working in service desks the tools to support their organization.

**User registry** — Create, edit and remove users in Mivida's user registry.

**Bulk actions** — Move users between tenants and organizational units.

**Individual meeting rooms** — Associate users to virtual meeting rooms for elevated privileges.

## Meetings

Monitor ongoing meetings in real time, add value with white glove services to support end users with large meetings. For example controlling audio and video or set moderator status for all meeting participant.

**Monitoring** — Real-time monitoring of ongoing meetings.

**Scheduled meetings** — Overview of all users' scheduled meetings.

**Meeting control** — Control settings such as audio, video and screen layout for

## Analytics

Follow trends, export to Business Intelligence and analyze usage of meeting rooms and meeting platforms for organizations and service providers. Monitor usage of meeting rooms and meeting platforms in real time for proactive support.

**Generate reports** — Select a date period and generate reports of platform usage.

**Virtual meeting rooms** — Detailed statistics about each virtual meeting room.

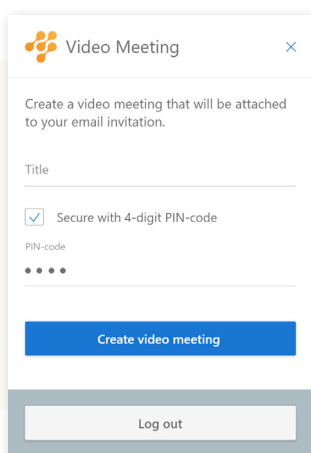

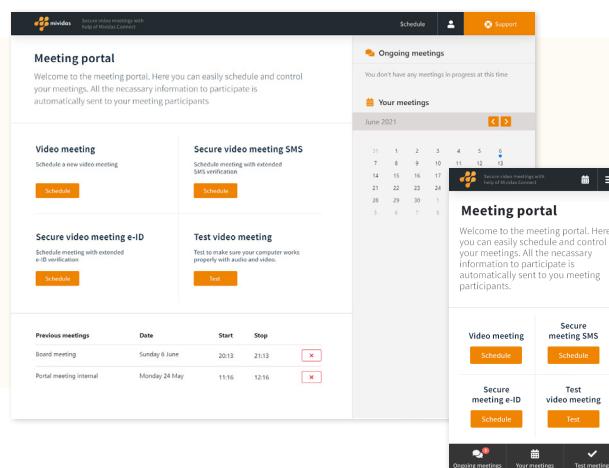

**Participants** — Gather statistics for length and number of calls for all participants.

## Optional end user components

Add our powerful scheduling and self-management tools, enabling end users to create meetings from Microsoft Outlook or via a web browser, utilizing 2-factor authentication, webinars, custom meeting templates and much more.

### Meeting Portal

Provides users with an easy and user-friendly way to schedule and view their meeting history directly from a web browser.

### Outlook Add-in

Our add-in for Outlook allows users to schedule video meetings either via their Outlook desktop client or web browser.
